

# Add Greater Numbers

**CA Standards**  
**KEY** NS 2.1, AF 1.0

Use the table to solve.

Largest Saltwater Fish Caught	
Fish	Weight
Atlantic blue marlin	1,402 pounds
Black marlin	1,560 pounds
Bluefin tuna	1,496 pounds
Great white shark	2,664 pounds
Greenland shark	1,709 pounds
Pacific blue marlin	1,376 pounds
Shortfin mako shark	1,221 pounds
Swordfish	1,182 pounds
Tiger shark	1,780 pounds

1. How much do the tiger shark and the black marlin weigh together?

\_\_\_\_\_

3. Which two fish in the table weigh the least? What is their combined weight?

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

5. Someone catches a tiger shark that weighs 4,817 pounds more than the largest one caught before. How much does this tiger shark weigh?

\_\_\_\_\_

2. How much do the Greenland shark and the Atlantic blue marlin weigh together?

\_\_\_\_\_

4. Find the two fish in the table that weigh the most. How much do those two fish weigh together?

\_\_\_\_\_

6. Which two fish together weigh 2,872 pounds?

\_\_\_\_\_

\_\_\_\_\_
