

# Division Rules

**CA Standards**  
NS 2.6, MR 3.0

Solve each problem.

1. Charlie runs a dog-walking service. He has 5 leashes. He uses 1 leash for each dog. How many dogs can Charlie walk at the same time?

\_\_\_\_\_

3. Charlie had 12 dog biscuits. He gave each of the 12 dogs the same number of biscuits. How many biscuits did he give each dog? How do you know?

\_\_\_\_\_

\_\_\_\_\_

5. Charlie walks 5 dogs. He wants to divide his dog-walking responsibilities evenly among his friends. How many friends must help him walk the dogs?

\_\_\_\_\_

2. Charlie walks the dogs the same distance every day. He walks 7 miles every week. How many miles does he walk each day?

\_\_\_\_\_

4. Charlie planned to split his earnings from Friday with his sister if she helped walk the dogs. He did not give any money to his sister. What can you conclude?

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

6. Charlie receives one new leash per week for each dog he walks. If he starts by walking 5 dogs, how many leashes will he have after 3 weeks?
