

Double Bar Graphs

CA Standards
SDAP 1.3, SDAP 1.0

The outdoor arena in Hillary’s town is used regularly for both sporting events and musical concerts. The double bar graph below shows the attendance for each kind of event for a 3-month period. Use the data to solve the problems.

1. In what month did music attendance at the arena outnumber sporting events attendance?

3. In which month did sports attendance double that of music concert attendance?

5. What was the total attendance of all sporting events from July to September?

2. In what month was attendance for both kinds of events equal?

4. By how much did attendance of sporting events grow from July to August?

6. How many more people would have had to attend concerts to equal the attendance of sporting events during this 3-month period?
