

Place the First Digit of the Quotient

$$336 \div 4 = \blacksquare$$

Step 1: Check the hundreds.
Because $3 < 4$, there are not enough hundreds.

$$\begin{array}{r} 4 \overline{)336} \\ \uparrow \end{array}$$

Step 2: Check the tens.
Because $33 > 4$, place first digit in tens place. Divide the tens.

$$\begin{array}{r} 8 \\ 4 \overline{)336} \\ - 32 \\ \hline 1 \end{array}$$

Step 3: Divide the ones.

$$\begin{array}{r} 84 \\ 4 \overline{)336} \\ - 32 \downarrow \\ \hline 16 \\ - 16 \\ \hline 0 \end{array}$$

Divide. Check your answers.

1. $4 \overline{)376}$

2. $3 \overline{)269}$

3. $5 \overline{)436}$

4. $3 \overline{)283}$

5. $5 \overline{)418}$

6. $7 \overline{)518}$

7. $2 \overline{)189}$

8. $6 \overline{)583}$

9. $197 \div 4$

10. $132 \div 6$

11. $483 \div 5$

12. $326 \div 4$

13. $234 \div 3$

14. $357 \div 4$

15. $475 \div 5$

16. $538 \div 6$
